[Overview](#)

## Rocket LDAP Bridge

A virtual directory based on an information broker model, the Rocket LDAP Bridge for z/OS runs on IBM OS/390 as well as z/OS and is designed to meet the needs of the large global enterprise.

With Rocket LDAP Bridge for z/OS, data access is real-time -- eliminating problems with data replication and synchronization. And, data access is both read and write. This allows the propagation, removal, and modification of user information on the mainframe using LDAP add, modify, delete and modrdn operations.

## Products Features & Functionality

- Using the LDAP V3 protocol, it provides real-time read and write access to employee security repositories: IBM RACF, CA-ACF2, CA-Top Secret
- Using the LDAP V3 protocol, it provides real-time read and write access to employee master files residing in: DB2, IMS, and VSAM
- Using the LDAP V3 protocol, it provides real-time read and write access to proprietary employee repositories: Geac, SAP, PeopleSoft, Siebel, and others, as well as homegrown repositories
- Using the LDAP V3 protocol, it provides real-time read and write access to customer master files residing in: DB2, IMS, and VSAM
- Using the LDAP V3 protocol, it provides real-time read and write access to proprietary customer repositories: Sterling, SAP, PeopleSoft, Siebel, and others, as well as homegrown repositories
- Using the LDAP V3 protocol, it provides real-time read and write access to any other mainframe data source

## Availability

Rocket Software retains Rocket LDAP Bridge in its own catalog for direct sale to enterprise customers. For more information [click here](#) or [contact us](#) for further assistance.

Rocket Software, Inc. is a member of the RSA Secured Partner Program, an RSA SecurWorld Channel Partner and an authorized RSA Reseller.
